The inventions are distinct, each from the other because:

Each of the 21 groups corresponds to a peptide sequence or method of making it or using it.

There are 21 groups in each "super group". Each group is drawn to a genus of structurally distinct peptides, or method of making or using the same. The special technical feature of each group is the generic structure. The generic structures all share the technical feature of being "penetrating" peptides. However, this is not deemed to be a special technical feature within the meaning of PCT Rule 13.2 because such peptides are known in the art. Chakrabartty, et al., *Biochemistry*, 1993, 32, 5560-5565, teaches the peptide (table 1, sequence name yy-ak20, page 5561) that corresponds to the general formula represented by $(BX)_4Z(BX)_2ZXB$.

In the instant application claims 1, 14, 25 and 64 represent numerous peptide sequences. Applicants are requested to select one peptide to embody one invention with all the amino acids clearly indicated for the sequence.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1654

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
